11/6/2014	Broward	Diver	Please help our local communities develop a better way to protect our beach then re nourishment. This sand is killing our near shore reefs and habitat. If we can grow our reefs our beaches will naturally grown wider and thicker. Through education we can teach the local peoples to understand what they doing by trucking sand. Millions of dollars being spent on sand can bet put to better use on the development of a more permanent solution. It is so hard to watch the reefs fill with sand and become sick and develop lesions because of turbidity. We must stop now and find a better way!	Grow our reefs stronger, plant more corals, support more initiatives to protect our beaches that do not include hauling in sand.	Community events, marketing.	
11/5/2014	FL	Diver	It's very important to help our reefs, no take zones is most definitely the way to go, with Marine protected areas up and down the coast of South Florida, you will see an increase in fish population as the Marine protected areas replenish the rest of the reefs. It is vital to help save our Florida reefs,and fisheries.
