

N-75

Title: Promote/offer free pump out stations to better water quality and allow boats a better option than dumping waste offshore.

Objective: The intended outcome of this action is to improve water quality, reduce sewage in water and thus have potentially fewer coliform-related health warnings. The improved water quality will bring more tourism and improve economy along with the resident's quality of life.

Background: This recommended management action is being put forth to improve water quality over the reefs and in the estuaries due to the degradation of coastal waters which is a direct result from boats dumping their holding tanks, as opposed to having them pumped out.
