

S-110

Title: Eliminate over beach discharge of water to eliminate those sources of beach erosion reducing the amount of beach fill needed which may improve near shore water quality.

Objective: The intended outcome of this action is to divert stormwater runoff away from the beach; build up pavers/dunes systems; diffuse storm water (point source runoff); eliminate over beach discharge to decrease beach erosion and reduce the amount of beach fill needed which may improve near shore water quality.

Background: This recommended management action is being proposed to reduce the dune erosion from point source runoff to decrease the need for beach renourishment. The focus of this action is to look at how the storm water discharge causes erosion to our beaches.
