

S-101

Title: Create a training program based on existing Best Management Practices that will be required for coastal construction on-site project contractors to be implemented by January 1, 2020, as required in a coastal construction permit.

Objective: The intent of this recommended management action is to have less damage to southeast Florida coral reefs and better water quality by increasing the number of coastal construction companies certified in project management “Best Management Practices” (and/or professional individuals).

Background: This recommended management action is being put forth because most coastal construction can negatively impact the near shore reefs and ecosystems and our existing practices are detrimental to reef system health.
