

# S-124

**Title:** Facilitate the creation of regional (inlet-to-inlet) beach management strategies, such as can be achieved through a beach management agreement, which takes an ecosystem approach to projects such as beach nourishment and storm-water pipe removal to maintain beaches and protect resources.

**Objective:** The intended outcome of this action is to have a regional, ecosystem-based approach to beach management, as well as improved regulation and streamlined application/permitting process for beach nourishment.

**Background:** This recommended management action is being put forth because permits for beach management activities (including erosion control structures and nourishments) are issued on a project-by-project basis, which reduces the efficiency of permitting and regulatory actions.
